

VIGILANCE REDEFINED — FOR CARE SETTINGS

Your cameras already see the risk. Now they can act on it.

365 turns the IP cameras you already own into an AI safety layer — real-time alerts for staff on the floor, clear visibility for leadership. Plug-and-play and à la carte — no rip-and-replace.

100–200

falls a year in a typical 100-bed nursing home¹

98 deaths

among 2,000+ senior-living elopements since 2018²

5×

the workplace-violence injury rate for healthcare workers vs. all private industry³

01 // PREVENTABLE EVENTS

Preventable events drive liability, survey findings and lost census.

Falls AI fall detection in halls, dining and common areas alerts nearby staff in seconds. Time-stamped video shows what happened in unwitnessed falls.	Elopement & heat exposure Virtual boundaries on exits, courtyards, parking lots and ponds alert staff the moment a resident crosses — before heat or traffic does harm.	Missed rounds & hydration Journey tracking and AI search verify rounds and hydration passes happened. Unattended-station alerts flag overnight coverage gaps.
Infection control Video at isolation rooms, sinks and kitchens supports PPE, handwashing and food-safety audits. Trace who was near infected residents in minutes.	Staff safety Wearable and wall-mounted duress buttons send a discreet alert with exact location and live video to the right responders.	Access & diversion Every badge swipe at med rooms, supply rooms and exits is tied to video. Tailgating and propped-door alerts close the gaps.

One platform. Two views.

02 // TWO VIEWS

LEADERSHIP VIEW

Administrators, DONs, executive directors, risk & compliance

- Incident trends, response times and exception reports — one building or a whole portfolio.
- Search hours of footage in seconds for survey, complaint and claims documentation.
- Objective evidence of staffing coverage and rounding to support QAPI and defend claims.

FLOOR VIEW

Nurses, CNAs, caregivers, security and front desk

- Real-time alerts to the phone in your pocket: fall, exit breach, door propped open.
- One press on a duress button shares your location and live video with responders.
- Know where help is needed now — not at the end of the shift.

Where 365 pays for itself first

Each setting feels a different exposure most. Everything is à la carte — turn on only what your building needs, on the cameras already on the wall.

Skilled Nursing01 // SNF Top exposures: falls, elopement, accident-supervision and infection-control citations (F689, F880), staff injuries - Fall and exit alerts routed to the unit on duty; video to reconstruct unwitnessed events. - Survey-ready records of rounding, response times and outbreak contact tracing.	Assisted Living & Memory Care02 // ALF Top exposures: memory-care elopement, overnight staffing gaps, common-area falls, family trust - Perimeter and courtyard boundaries with instant staff alerts, day and night. - Proof of overnight rounding and response — a move-in advantage families can see.
Independent Living03 // IL Top exposures: open campuses, visitor traffic, residents alone in common spaces - Visitor management, access control and perimeter watch that doesn't feel institutional. - Common-area fall detection, so a fall in the lobby or fitness room isn't missed.	Group Homes04 // IDD · BH Top exposures: lone overnight staff, elopement, behavioral escalations, med-room access - Duress buttons and live-video backup for staff working alone. - Overnight door and awake-staff verification; med-room access tied to video.
Hospitals05 // ACUTE Top exposures: ED and behavioral-health violence, firearms, restricted-area access, open entrances - Multi-model firearm detection and duress alerts routed to security in seconds. - Tailgating alerts and access control for pharmacy, OR and staff-only areas.	Outpatient Practices06 // CLINIC Top exposures: front-desk confrontations, after-hours break-ins, controlled-substance storage - Panic buttons at the front desk and exam areas, backed by 24/7 virtual guard monitoring. - Enterprise-grade protection sized for one practice, on existing cameras.

Live in weeks, not a construction project

04 // DEPLOYMENT

01 · WALKTHROUGH On-site safety assessment and camera audit. [CONFIRM: complimentary]	02 · CONNECT AI layers onto existing IP cameras. Add hardware only where gaps exist.	03 · CONFIGURE Pick features à la carte; set zones, alerts and routing to your units.	04 · GO LIVE Staff alerts, leadership dashboards, optional 24/7 monitoring by 365.
---	--	---	--

PRIVACY BY DESIGN. Monitoring focuses on hallways, common areas, entrances and exteriors — not resident rooms or bathrooms. HIPAA-ready platform with SOC 2 controls, on-premises video processing, encryption and role-based access to footage. [CONFIRM: BAA terms]
